## General Description

The NL27WZU04 is a high performance dual unbuffered inverter operating from a 1.65 to 5.5 V supply. This device consists of a dual unbuffered inverter. In combination with others, or in the MC74LCXU04 Hex Unbuffered Inverter, these devices are well suited for use as oscillators, pulse shapers, and other applications requiring a digital part used in an analog mode. Owing to its low complexity, the analog performance is more uniform from part to part. For pure digital applications, the NL17SZ04, NL27WZ04, NL37WZ04 or the MC74LCX04 are recommended. Current drive capability is 24 mA at the outputs.

## Features

Designed for 1.65 V to 5.5 V VCC Operation

Over Voltage Tolerant Inputs

LVTTTL Compatible - Interface Capability With 5 V TTL Logic with >

LVC MOS Compatible

16 mA Balanced Output Sink and Source Capability

Near Zero Static Supply Current Substantially Reduces System Power Requirements

Pb-Free Package is Available

## Application

ONSEMI
