

Operational Amplifiers - Op Amps 1.8-12V Quad Rail to

Manufacturers	NXP
Package/Case	14-SOIC
Product Type	Amplifier ICs
RoHS	Rohs
Lifecycle

General Description

The MC33204DTB is a quad op-amp that consists of four independent op-amps in a single IC package. Each op-amp can provide precise amplification and signal conditioning with high gain accuracy and low noise characteristics.

Features

- Quad operational amplifier IC
- Four independent op-amps
- High precision and gain accuracy
- Low input offset voltage
- Low input bias current
- Low noise performance
- Wide supply voltage range
- Rail-to-rail input and output capability

Application

- Instrumentation amplifiers
- Audio amplifiers
- Active filters
- Sensor signal conditioning
- Data acquisition systems
- Test and measurement equipment
- Communication systems
- Industrial control systems
