## General Description

XCF01SV020C is a specific type of programmable logic device (PLD) manufactured by Xilinx Inc.

### Features

It has a capacity of 1 Mb (128K x 8) of non-volatile configuration memory.

It operates on a 3.3V power supply.

It has a low standby current of 10  $\mu$ A.

It has a fast access time of 15 ns.

It supports in-system programmability.

### Application

XCF01SV020C is commonly used in embedded systems, digital circuits, and consumer electronics products.

It can be used for configuration of field-programmable gate arrays (FPGAs) and complex programmable logic devices (CPLDs).

It can also be used for code storage and system configuration in applications such as set-top boxes, gaming consoles, and industrial automation.
